

Project Brief

State Street TRAX Bridge

**2007 Legislative
Update**

Provided By:

**Project
Inter**

The U completed an environmental study for State Street (US-89) between 8000 South and 7720 South. The project includes replacing the UTA TRAX Bridge over US-89 and providing a second TRAX track, and widening State Street beneath the bridge structure. The project also includes reconstruction of the 7800 South signalized intersection north of the TRAX bridge as well as improvements to the Center Street (7720 South) signalized intersection.

The existing roadway under the bridge is a narrow, four-lane highway (two lanes each direction) with drainage problems. North and south of the project, State Street is a five-lane cross section; two through lanes in each direction, with a left turn lane in the median.

A Public Information Manager has been assigned to this project to keep local businesses, residents and commuters informed about construction impacts. For construction information call, 801-673-0774, or email, TRAXBridge@comcast.net.

NOTE: Schedule information listed above is estimated and could change without notice based on funding, scheduling constraints, stakeholder issues, and other unanticipated project elements.
